

What is claimed is:

1. An entertainment system comprising:
  - a first video input for receiving video signals from an original source;
  - a first audio input for receiving first audio signals from said original source;
  - a second audio input for receiving second audio signals from a secondary source independent of said original source;
  - a first volume control for selectively adjusting the volume level of said first audio signals;
  - a second volume control for selectively adjusting the volume level of said second audio signals; and
  - a device for mixing said selectively adjusted first audio signals with said selectively adjusted second audio signals.
2. The entertainment system as recited in Claim 1 further comprising:
  - a recording device for recording said mixed first and second audio signals for subsequent playback.
3. The entertainment system as recited in Claim 2 wherein said recording device is further structured and disposed for recording said video signals from said original source with said mixed first and second audio signals for subsequent playback.
4. The entertainment system as recited in Claim 1 wherein said original source of said video signals and said first audio signals is a broadcast program.

5. The entertainment system as recited in Claim 1 wherein said original source of said video signals and said first audio signals is a recorded medium.

6. The entertainment system as recited in Claim 1 wherein said secondary source includes at least one microphone.

7. The entertainment system as recited in Claim 6 wherein said second audio signals are transmitted through said one or more microphones and are derived from voice dialogue, noises and utterances made by one or more users.

8. An entertainment system comprising:  
a first audio input for receiving first audio signals from said original source;  
a second audio input for receiving second audio signals from a secondary source independent of said original source;  
a first volume control for selectively adjusting the volume level of said first audio signals;  
a second volume control for selectively adjusting the volume level of said second audio signals; and  
a device for mixing said selectively adjusted first audio signals with said selectively adjusted second audio signals.

9. The entertainment system as recited in Claim 8 further comprising:  
a recording device for recording the mixed first and second audio signals for subsequent playback.

10. The entertainment system as recited in Claim 9 wherein said original source of said first audio signals is a broadcast program.

11. The entertainment system as recited in Claim 10 wherein the broadcast program is a conventional television signal.

12. The entertainment system as recited in Claim 10 wherein said broadcast program is a cable television signal.

13. The entertainment system as recited in Claim 10 wherein the broadcast program is a satellite television signal.

14. The entertainment system as recited in Claim 9 wherein said original source is a recorded medium.

15. The entertainment system as recited in Claim 9 wherein said secondary source includes at least one microphone and said second audio signals are derived from voice dialogue, noises and utterances made by one or more users through at least one microphone.

16. The entertainment system as recited in Claim 15 wherein said secondary source comprises a plurality of said microphones.

17. A method of playing a game for amusement and entertainment, comprising the steps of:

providing a television monitor and speakers for playing an original program containing audio and video;

providing a device comprising:

a first video input for receiving video signals from the original program;

a first audio input for receiving first audio signals from the original program;

a second audio input for receiving second audio signals from a secondary source independent of the original program;

a first volume control for selectively adjusting the volume level of said first audio signals;

a second volume control for selectively adjusting the volume level of said second audio signals; and

means for mixing the selectively adjusted first audio signals with said selectively adjusted second audio signals;

providing a microphone to each of a plurality of players of the game;

playing the original program on the television monitor;

interjecting dialogue, utterances and noises by each of the plurality of players using the respective microphones;

adjusting the volume level of the audio of the original program;

adjusting the volume level of the interjected dialogue, noises and utterances of the players;

mixing the interjected dialogue, noises and utterances of the players with the audio of the original program;

recording the video of the original program with the mixed audio of the original program and interjected dialogue, noises and utterances of the players on a selected medium to produce a recorded master copy; and

playing the recorded master copy on the television monitor and speakers for amusement and entertainment.
